

VS Code interface showing a project named `AI_Smile_Age_Prediction`. The Explorer pane on the left lists files including `train_smile_model.py`, `age_data_prepare.py`, `age_model_train.py`, `real_time_age_smile.py`, and `haarcascade_frontalface_default.xml`. The Open Editors pane shows `Activate.ps1` and `Age + Smile Detection`.

The `Age + Smile Detection` window displays a video feed of a person's face. A green bounding box is drawn around the face, and the text `Age: 21-30` and `No Smile ???? (49.36%)` is overlaid in green.

The terminal pane at the bottom shows the output of running `python real_time_age_smile.py`. The output includes TensorFlow warnings and a message indicating the model is loaded successfully.

```
2026-02-15 19:14:12.508157: I tensorflow/core/util/port.cc:153] oneDNN custom operations are on. You may see slightly different numerical results due to floating-point round-off errors from different computation orders. To turn them off, set the environment variable `TF_ENABLE_ONEDNN_OPTS=0`.
Loading Age Model...
2026-02-15 19:14:23.079142: I tensorflow/core/platform/cpu_feature_guard.cc:210] This TensorFlow binary is optimized to use available CPU instructions in performance-critical operations.
To enable the following instructions: SSE3 SSE4.1 SSE4.2 AVX AVX2 AVX_VNNI FMA, in other operations, rebuild TensorFlow with the appropriate compiler flags.
